

In light of Google's recent updates to the Manifest Version 2 timelines, we strongly recommend that all users of the NetSpective Extension for Chrome take action by enabling the [ExtensionManifestV2Availability](#) policy in your Google Admin Console before June 2024. This step is essential due to Google's revised timeline, as failure to update may result in the extension being disabled after June 2024. By enabling this policy, you will ensure the continued operation of the NetSpective Extension for Chrome through June 2025.

Here's how you can enable this policy:

1. Log into your Google Admin console.
2. Navigate to Devices > Chrome > Settings.
3. Select the parent Organizational Unit where you want to enable 'Manifest V2 extension availability' policy.
4. Under the 'Users & browser settings' tab, locate the policy named Manifest V2 extension availability using the 'Filter settings' option.

5. Choose Manifest V2 extension availability. In the '**Configuration**' dropdown menu, select '**Enable manifest V2 extensions**'.
